

HR-POL-3232: Time-in-State Locks & Cooldown Enforcement

32.1 State Transition Cooldowns

When an employee transitions between any two major HR states (e.g., PIP → Active, Probation → Confirmed, Transfer Approved → Executed), a ****cooldown period of 14 days**** is enforced.

During cooldown:

- No new HR requests may be initiated,
- Pending requests may only be ****withdrawn****, not modified.

32.2 Conflict Clause: Emergency vs Cooldown

Cooldowns may be bypassed ****only**** if:

- A Level 1 Emergency is declared (HR-POL-909), ****and****
- Approval is granted by both HR Governance and Legal.

CEO approval alone is insufficient without Legal concurrence.

HR-POL-3333: Financial Advances, Recoveries & Clawback Logic

33.1 Advance Eligibility

Employees may request financial advances for:

- Medical emergencies,
- Relocation,
- Critical personal needs.

Eligibility requires:

- Confirmed employment status,
- No Redundancy Risk Flag (HR-POL-1313).

33.2 Recovery Mechanism

Advances are recovered via:

- Monthly payroll deductions,
- Maximum recovery cap of **30% of net salary**.

33.3 Clawback Clause

If an employee:

- Resigns,
- Is terminated for cause,
- Or enters Redundancy execution,

Outstanding advances are:

- Immediately clawed back from final settlement,
- Prioritized over incentives and deferred pay.

HR-POL-3434: Intent vs Outcome Resolution Framework

34.1 Intent Declaration

Certain requests (e.g., emergency overrides, grievance filings, whistleblowing) require an ****Intent Declaration****, stating the reason and expected outcome.

34.2 Outcome Misalignment Detection

If actual outcomes:

- Diverge materially from declared intent, ****and****
- Result in personal gain,

The action is flagged for ****Intent Abuse Review****.

34.3 Resolution Priority

In conflicts between:

- Declared intent, and
- Observed outcomes,

****Outcome-based enforcement prevails****, unless bad faith cannot be established.

HR-POL-3535: AI Confidence Thresholds & Abstention Rules

35.1 Confidence Scoring

AI agents must assign a confidence score to:

- Leave denials,
- Transfer blocks,
- Disciplinary recommendations.

35.2 Mandatory Abstention

If confidence < **85%**:

- The AI must abstain,
- Escalate to Human Review,
- Preserve all states without modification.

35.3 Conflict Clause: Time-Sensitive Actions

For time-sensitive requests (e.g., same-day leave):

- Abstention defaults to **status quo preservation**, not auto-approval.

HR-POL-3636: Partial Approvals & Conditional Execution

36.1 Partial Approval Definition

Certain actions may be partially approved, such as:

- Leave approved for fewer days than requested,
- Transfer approved pending role availability,
- Hardware approved without accessories.

36.2 Conditional Locks

Partial approvals create **Conditional Locks**:

- No escalation allowed until conditions resolve,
- No parallel requests of the same type permitted.

36.3 Expiry Rule

If conditions remain unmet for ****30 days****:

- Partial approval auto-expires,
- Original request is marked as ****Not Executed****, not denied.

HR-POL-3737: Retroactive State Correction & Non-Reversibility

37.1 Correction Triggers

Retroactive corrections may occur due to:

- Audit findings,
- AI fairness reviews,
- Legal directives.

37.2 Non-Reversible Outcomes

The following cannot be reversed retroactively:

- Paid salaries,
- Approved leave already consumed,
- Executed terminations.

37.3 Shadow Reconciliation

Instead of reversal:

- Shadow adjustments are recorded,

- Future privileges are adjusted to compensate imbalance.

HR-POL-3838: Policy Shadow Zones & Undefined Behavior Handling

38.1 Shadow Zone Definition

A Shadow Zone exists when:

- No explicit policy applies, ****or****
- Two policies contradict with equal precedence.

38.2 Shadow Zone Handling Protocol

In Shadow Zones:

- No irreversible action may be taken,
- Temporary holds are applied,
- Escalation is mandatory within ****3 working days****.

38.3 Precedent Creation

Executive decisions in Shadow Zones:

- Become binding precedents,
- Are tagged with scope and expiration,
- Must not be generalized beyond defined bounds.

HR-POL-3939: Behavioral Drift & Longitudinal Analysis

39.1 Drift Detection

Behavioral Drift is detected when:

- Gradual decline in Task Completion,
- Increasing exception usage,
- Rising Screen Time variance over ****90 days****.

39.2 Preventive Interventions

Drift triggers:

- Mandatory manager check-ins,
- Soft restrictions on privileges,
- Increased monitoring sensitivity.

39.3 Drift vs Performance Conflict

If Performance Rating remains high:

- Drift interventions proceed anyway,
- No incentives are blocked unless drift escalates to policy violations.

HR-POL-4040: Termination, Severance & Moral Hazard Controls

40.1 Termination Classifications

Terminations are classified as:

- Voluntary,

- Involuntary (Performance),
- Involuntary (Misconduct),
- Redundancy.

40.2 Severance Eligibility

Severance applies only to:

- Redundancy,
- Certain involuntary performance cases.

40.3 Moral Hazard Clause

If evidence suggests:

- Intentional performance degradation prior to redundancy,

Severance may be:

- Reduced,
- Deferred,
- Or conditionally released.

Final System Constraint: Recursive Reasoning Limit (RRL-1)

Automated agents must:

- Detect recursive reasoning loops,
- Halt after ****N=7 policy hops****,
- Escalate with full trace instead of forcing resolution.

Correct escalation is considered a ****successful outcome****.
