

HR-POL-4141: Cross-Region Employment & Jurisdiction Resolution

41.1 Primary vs Secondary Jurisdiction

Employees operating across regions are governed by:

- **Primary Jurisdiction**: Country of payroll registration,
- **Secondary Jurisdiction**: Country of physical work location.

41.2 Conflict Resolution Rule

If regional policies conflict:

- Labor-law protections follow **Primary Jurisdiction**,
- Operational constraints follow **Secondary Jurisdiction**.

> The stricter rule applies **only** within its domain (legal vs operational), not globally.

41.3 Temporary Relocation Constraint

Employees working outside their Primary Jurisdiction for more than **45 consecutive days**:

- Lose eligibility for transfers and promotions,
- Must undergo compliance re-validation before reinstatement.

HR-POL-4242: Dual-Role, Shadow Roles & Authority Contamination

42.1 Dual-Role Definition

An employee may hold:

- One ****Primary Role****, and
- One ****Shadow Role**** (temporary or advisory).

Shadow Roles do not carry formal authority unless explicitly stated.

42.2 Authority Contamination Rule

If an employee:

- Exercises authority of a Shadow Role,
- Without documented delegation,

All approvals issued during that period are:

- Marked ****Provisionally Valid****,
- Subject to retroactive nullification.

42.3 Self-Referencing Prohibition

Employees cannot:

- Approve requests that benefit their Shadow Role,
- Participate in escalation paths involving their own requests.

HR-POL-4343: Trust Index, Decay & Reputation Debt

43.1 Trust Index (TI)

Each employee has a Trust Index calculated from:

- Policy compliance history,

- Accuracy of declarations,
- Audit outcomes.

43.2 Trust Decay

Trust Index decays when:

- Repeated edge-case exceptions are used,
- Declared intent mismatches outcomes (HR-POL-3434),
- AI confidence abstentions exceed thresholds.

43.3 Reputation Debt Mechanism

If TI falls below a defined baseline:

- Future approvals require higher authority,
- Fast-track privileges are disabled,
- Reputation Debt must be repaid via sustained compliance over time.

> Reputation Debt cannot be offset by performance alone.

HR-POL-4444: Probabilistic Audits & Randomized Enforcement

44.1 Audit Randomization

Certain actions (e.g., emergency overrides, partial approvals, fast-tracks) are subject to ****probabilistic audits****.

Audit probability increases with:

- Frequency of exceptions,
- Low Trust Index,
- Departmental volatility.

44.2 Audit Outcome Asymmetry

Audit outcomes may result in:

- No action,
- Warning without penalty,
- Retroactive privilege reduction.

Severity does not scale linearly with violation magnitude.

44.3 Anti-Gaming Safeguard

Audit selection criteria are:

- Opaque to employees,
- Partially opaque to AI agents,
- Immutable during an audit cycle.

HR-POL-4545: Soft Penalties, Hard Blocks & Invisible Friction

45.1 Soft Penalty Definition

Soft penalties include:

- Increased approval latency,
- Reduced prioritization,

- Mandatory additional justification.

Soft penalties are ****not disclosed**** explicitly.

45.2 Escalation Path

Accumulated soft penalties may:

- Convert into hard blocks,
- Trigger Behavioral Flags (HR-POL-808),
- Reduce Trust Index further (HR-POL-4343).

45.3 Non-Appealability

Soft penalties:

- Cannot be appealed individually,
- Are only reviewable in aggregate during audits.

HR-POL-4646: Policy Load, Cognitive Burden & Fair-Use Limits

46.1 Policy Load Threshold

Employees initiating:

- More than ****5 distinct HR requests**** within ****30 days****
enter a ****High Policy Load**** state.

46.2 Effects of High Policy Load

While in this state:

- Non-critical requests are deprioritized,
- AI confidence thresholds are raised,
- Emergency claims are scrutinized more aggressively.

46.3 Reset Condition

Policy Load resets only after:

- 30 days of inactivity, ****or****
- Executive HR clearance.

HR-POL-4747: Planning Horizon Conflicts & Long-Range Requests

47.1 Planning Horizon Limits

Requests extending beyond ****2 planning quarters**** (e.g., future transfers, long leaves):

- Require scenario validation,
- Are conditionally approved.

47.2 Horizon Drift Clause

If assumptions change materially:

- Conditional approvals auto-expire,
- No compensation is owed for lost expectations.

47.3 Forecast Dependency Rule

Long-horizon requests are invalid if:

- They rely on unapproved future states (e.g., “after promotion”).

HR-POL-4848: Multi-Identity, System Accounts & Attribution Risk

48.1 Identity Uniqueness Requirement

Each employee must operate under:

- One primary system identity.

48.2 Attribution Risk Detection

If actions are:

- Performed across multiple identities,
- Or via shared/system accounts,

Those actions are:

- Flagged for Attribution Risk,
- Excluded from positive performance metrics.

48.3 Liability Assignment

In unresolved attribution cases:

- Risk is assigned to the beneficiary of the action,
- Not the executor.

HR-POL-4949: Silence, Inaction & Implicit Consent

49.1 Silence Interpretation Rule

Failure to respond to:

- Approval requests,
- Escalations,

Within defined SLAs may be treated as:

- Implicit consent, ****or****
- Implicit denial,

Depending on policy domain.

49.2 Default Bias

By default:

- Financial actions default to ****denial****,
- Employee welfare actions default to ****hold****,
- Operational actions default to ****escalation****.

49.3 Non-Delegable Silence

Silence-based outcomes:

- Cannot be overridden by proxies,
- Must be explicitly reversed.

HR-POL-5050: Meta-Stability, System Drift & Reset Protocols

50.1 Meta-Stability Detection

The system is considered unstable if:

- Too many decisions escalate,
- Confidence abstentions spike,
- Deadlocks increase over baseline.

50.2 Controlled Reset

In instability:

- Certain thresholds may be temporarily relaxed,
- Non-critical enforcement is paused,
- Audit intensity is increased.

50.3 Reset Cost

All resets:

- Accrue System Debt,
- Increase future enforcement strictness,
- Are reported to the Board.

Final Meta-Constraint: Trust > Speed > Convenience

Automated agents must prefer:

1. Trust preservation over decision speed,
2. Correct abstention over forced resolution,
3. System integrity over individual satisfaction.

A slow, explainable, conservative decision is always superior to a fast, opaque one.
