

HR-POL-5151: Organizational Memory & Historical Weighting

51.1 Historical Performance Memory (HPM)

The organization maintains a rolling ****24-month Historical Performance Memory**** for each employee, aggregating:

- Performance Ratings,
- Task Completion Scores,
- Policy violations and exceptions.

HPM is ****not visible**** to employees but influences automated decisions.

51.2 Weighted Recency Rule

Recent events are weighted more heavily:

- Last 3 months: 1.5×
- Last 12 months: 1.0×
- Older than 12 months: 0.5×

> High recent performance cannot fully negate sustained historical underperformance.

51.3 Cross-Policy Interaction

HPM is consulted when:

- Confidence thresholds are borderline (HR-POL-3535),
- Trust Index is near minimum acceptable levels (HR-POL-4343).

HR-POL-5252: Collective Accountability & Team-Based Penalties

52.1 Collective Accountability Trigger

If:

- More than **30%** of a department's members violate the same policy within a quarter,

A **Collective Accountability Flag** is raised.

52.2 Department-Level Consequences

While the flag is active:

- Departmental approvals require higher authority,
- Bonus pools are reduced by **10%** (HR-POL-1818),
- Leave denials under HR-POL-101 are enforced more strictly (threshold raised to **70% TCS**).

52.3 Individual Relief Clause

High-performing individuals (top 10% Performance Rating) may request relief, but relief **cannot** override department-wide freezes.

HR-POL-5353: Cascading Freezes & Containment Logic

53.1 Primary Freeze Events

Primary freezes include:

- Compliance audits (HR-POL-2828),

- System instability resets (HR-POL-5050),
- Executive directives.

53.2 Cascading Effect

A primary freeze automatically triggers:

- Secondary freezes on related actions (e.g., promotions → compensation),
- Temporary suspension of discretionary approvals.

53.3 Containment Boundary

Cascading freezes:

- Must not spread beyond **two organizational levels**,
- Require justification logs if extended beyond **14 days**.

HR-POL-5454: Policy Fatigue & Diminishing Enforcement

54.1 Policy Fatigue Indicator

Policy Fatigue is detected when:

- Exception requests spike,
- Compliance rates drop across multiple policies,
- Grievance filings increase concurrently.

54.2 Adaptive Enforcement Mode

During Policy Fatigue:

- Low-risk policies are enforced with warnings first,
- High-risk policies remain strictly enforced,
- AI agents must increase explanation verbosity.

54.3 Fatigue Exit Condition

Policy Fatigue mode exits only after:

- Compliance stabilizes for ****2 consecutive cycles****, ****or****
- Executive HR intervention.

HR-POL-5555: Paradoxical Incentives & Risk Compensation

55.1 Incentive Distortion Detection

If incentives lead to:

- Short-term metric inflation,
- Long-term degradation in quality,

A ****Paradoxical Incentive Flag**** is raised.

55.2 Temporary Incentive Suspension

While flagged:

- Variable pay is capped,
- Performance metrics are normalized downward,
- Promotions based on those metrics are deferred.

55.3 Non-Punitive Clause

Paradoxical Incentive enforcement:

- Is corrective, not disciplinary,
- Does not create Behavioral Flags unless abuse is proven.

HR-POL-5656: Knowledge Hoarding & Dependency Risk

56.1 Dependency Risk Identification

An employee is flagged for ****Knowledge Dependency Risk**** if:

- They are the sole owner of critical knowledge,
- Documentation coverage is below required thresholds.

56.2 Risk Mitigation Actions

Mitigation may include:

- Mandatory documentation,
- Forced mentoring assignments,
- Temporary exclusion from leave during critical windows
(unless overridden by compliance or medical necessity).

56.3 Conflict Clause

Knowledge Dependency Risk:

- Does not override statutory leave rights,
- May override discretionary leave (HR-POL-101 EL planning).

HR-POL-5757: Shadow Metrics & Invisible Thresholds

57.1 Shadow Metric Definition

Shadow Metrics are internal indicators (e.g., collaboration entropy, review latency) used to:

- Detect systemic stress,
- Anticipate policy abuse.

Shadow Metrics are:

- Not disclosed,
- Not directly actionable by employees.

57.2 Decision Influence Rule

Shadow Metrics:

- Cannot independently deny requests,
- May tilt borderline decisions toward conservative outcomes.

57.3 Audit Safeguard

Any decision materially influenced by Shadow Metrics must:

- Be auditable,
- Cite at least one explicit policy justification.

HR-POL-5858: Collective Learning & Precedent Drift

58.1 Precedent Accumulation

Executive decisions (HR-POL-3838, Shadow Zones):

- Accumulate as precedents,
- Influence future interpretations.

58.2 Precedent Drift Risk

If precedents:

- Deviate from original policy intent,

A ****Precedent Drift Review**** is triggered.

58.3 Correction Mechanism

Drift may be corrected by:

- Issuing clarifying amendments,
- Invalidating precedents prospectively,
- Retraining AI agents on updated interpretations.

HR-POL-5959: Silence Cascades & Organizational Latency

59.1 Silence Cascade Detection

A Silence Cascade occurs when:

- Multiple approvals stall simultaneously,
- Escalations loop without resolution.

59.2 System Intervention

Upon detection:

- Pending requests are frozen,
- Default rules (HR-POL-4949) are suspended,
- Executive review is mandatory.

59.3 Post-Cascade Recovery

After resolution:

- Latency metrics are recalibrated,
- Approval SLAs may be temporarily tightened.

HR-POL-6060: Collective Trust Collapse & Emergency Governance

60.1 Trust Collapse Trigger

A ****Collective Trust Collapse**** is declared if:

- Average Trust Index drops below a critical threshold across multiple departments,
- Audit findings show systemic misuse.

60.2 Emergency Governance Mode

In this mode:

- All fast-track mechanisms are disabled,
- Emergency overrides require unanimous executive approval,
- AI agents default to abstention unless explicitly instructed.

60.3 Exit Criteria

Emergency Governance ends only after:

- Independent audit clearance,
- Formal Board acknowledgment.

Terminal Reasoning Constraint (TRC- ∞)

When system complexity exceeds safe resolution:

- ****Non-action with escalation is preferable to incorrect action**.**
- Agents must recognize when reasoning depth exceeds confidence limits.
- Failure to escalate appropriately is treated as a governance breach.
